

Battling Fatigue and Pain

by NEWLIFEOUTLOOK TEAM

Connecting Fatigue and Pain

One major contributor to fatigue in chronic pain is sleep quality. When you're in pain, it's impossible to get comfortable. You can help by keeping a regular sleep schedule, keeping your room dark and quiet, and the comfort of your mattress and pillow might even help. Try out mattresses in a store to see if there's one that feels very gentle against your body. You should also choose a pillow for the way you find you sleep the best. You should be sleeping on your side or back, since sleeping on your stomach can cause other issues.

Some Conditions with fatigue as a symptom

Medications	Fibromyalgia
Pain	Lupus
Sleep Disorders	Multiple Sclerosis
Substance Abuse	Anemia
Anxiety	Asthma
Arthritis	Depression

- Troust appetite

The **Fatigue Severity Scale (FSS)** is a self-reported questionnaire used to measure your fatigue. It consists of ...

NINE Questions,

each rated on a scale of

1-7

To score the Fatigue Severity Scale either add **all items** together (this will range from 7-63) or find the mean by adding your items together and dividing by 9. (This will range from 1-7)

In either case, the **higher the number** you calculate is, the **more fatigued** you are.

- 

1. **Sanuity & Quality of Sleep**

 - ✓ Have a regular bed time and wake up time
